

## **Short Bio**

- DDS, Ph. D. University of Granada (UGR)
- Postgraduate Orthodontic Program New York University College of Dentistry (NYUCD)
- Diplomate Member, Sociedad Española de Ortodoncia (SEDO)
- Diplomate Member, European Board of Orthodontists (EBO)
- Active Member of the Angle Society of Europe (ASE)

## **New Trends in Skeletal Anchorage and Clear Aligners**

The era of skeletal anchorage in orthodontia is already here. The possibilities for orthopaedic intervention and dento-alveolar camouflage of skeletal discrepancies have evolved into new boundaries. The clinician has now the chance of almost pursuing a pure orthopedic effect in the 3 planes of space with minimum dento-alveolar effect with simple protocols. Clear aligner treatment is also a very demanded treatment option in the adult patient.

In this presentation we will review the different protocols of treatment of the transverse skeletal discrepancies with the combination of MARPE and clear aligners in non-growing patients.
